Lez. 7: Modi di un sistema lineare, risposta libera e forzata (tempo discreto)

Corso di Laurea Magistrale in Ingegneria Meccatronica A.A. 2019-2020

# Nella scorsa lezione ▶ Modi elementari e evoluzione libera di un sistema lineare a tempo continuo ▶ Analisi modale di un sistema lineare a tempo continuo ▶ Evoluzione forzata di un sistema lineare a tempo continuo ▶ Matrice di trasferimento e equivalenza algebrica

 $\triangleright$  Addendum: calcolo di  $e^{Ft}$  tramite Laplace

# In questa lezione

▶ Modi elementari e evoluzione libera di un sistema lineare a tempo discreto

▶ Analisi modale di un sistema lineare a tempo discreto

▶ Evoluzione forzata di un sistema lineare a tempo discreto

#### Soluzioni di un sistema lineare autonomo?

Caso vettoriale  $x(t) = y(t) \in \mathbb{R}^n$ 

$$x(t+1) = Fx(t), \quad x(0) = x_0$$
$$x(t) = F^t x_0$$

#### Modi elementari

- **1.**  $\lambda_i \neq 0$ :  $\binom{t}{k} \lambda_i^{t-k} \sim t^k \lambda_i^t = t^k e^{t(\ln \lambda_i)}$  (ln(·) = logaritmo naturale complesso)
- **2.**  $\lambda_i = 0$ : modi elementari si annullano dopo un numero finito di passi!

Non esiste una controparte modale a tempo continuo!!
